[github.com/khanhjoi](https://github.com/khanhjoi) • [facebook.com/KhanhJoi1](https://facebook.com/KhanhJoi1)

Full-stack Developer with 2+ years of experience building and maintaining scalable web applications and enterprise systems. Strong expertise in JavaScript/TypeScript across both frontend (React, Next.js) and backend (Node.js, NestJS), along with solid experience in Java (Spring Boot). Experienced in designing REST/GraphQL APIs, microservices architecture, and event-driven systems using Webhooks and message brokers (Kafka, gRPC). Proven ability to optimize performance, improve legacy systems, and deliver production-ready features with measurable impact.

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                  |

| <b>Full-stack Developer</b><br><b>CyberLogitec</b><br><b>Project</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Jun 2024 - Now</b><br><b>Hồ Chí Minh</b>      |
| <b>Blueprint (Human Resource Management)</b><br>• A Human Resource Management System for the CLV company, serving as the core platform for managing staff. The backend was developed with Spring Boot and MyBatis (using an Oracle database), and the frontend used Webix (built on jQuery).<br>• Refactored and maintained legacy codebase, improving system stability and maintainability.<br>• Implemented new features (e.g., certificate management), streamlining internal processes, and improving user experience.                                                                                                                                                                                                      | <b>Mar 2025 – Present</b>                        |
| <b>Project</b><br><b>AMS (Asset Management System)</b><br>• AMS (Asset Management System) for CLV company, designed to manage IT/HR/account assets (e.g., devices, AI tools like Cursor and Claude), built with NestJS (Node.js) and Next.js.<br>• Developed and maintained backend services using NestJS, applying modular architecture and designing a queue-based system for email processing to ensure reliable and scalable asynchronous operations.<br>• Maintained and improved the legacy system while implementing new features, enhancing system stability, performance, and asset management workflows.                                                                                                              | <b>Feb 2025 – Present</b>                        |
| <b>CPS (Consultant platform system)</b><br>• An <b>internal consultant</b> platform for the CLV company. The backend was built with NestJS using a clean architecture approach and GraphQL for optimized API performance, database is using PostgreSQL. The frontend was built with Next.js, Tailwind CSS, and Ant Design.<br>• Participated in maintenance and bug fixing across multiple team modules.                                                                                                                                                                                                                                                                                                                        | <b>Jan 2025 – Feb 2025</b>                       |
| <b>Shipping Route Management System</b><br>• Designed and implemented a microservices-based architecture using NestJS for backend services (API Gateway, User Service) and Next.js for a responsive frontend.<br>• Enabled efficient communication between services using gRPC, Kafka, and REST APIs, with Redis for caching to optimize performance.<br>• Developed reusable libraries for common functionalities, published on NPM registry ([Link]), reducing code duplication by 30%. These libraries are published in the NPM registry: <a href="#">[Link]</a> .<br>• Collaborated with cross-functional teams to ensure scalability and maintainability of the system, achieving a 25% improvement in API response times. | <b>Jun 2024 - Nov 2024</b>                       |
| <b>Fresher Full-stack Developer</b><br><b>Bstar Solutions</b><br><b>Project</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Jan 2024 - Mar 2024</b><br><b>Hồ Chí Minh</b> |
| <b>Booking Hotel</b><br>• Designed and developed the database schema using PostgreSQL and implemented backend APIs with Java Spring Boot.<br>• Built a responsive frontend using ReactJS and TailwindCSS, ensuring seamless user experiences across devices. Worked closely with a team of 5 developers to deliver the project ahead of schedule, completing core functionality in 2 weeks.                                                                                                                                                                                                                                                                                                                                     | <b>Jan 2024 - Mar 2024</b>                       |

SKILLS

Frontend:

- **Languages:** HTML, CSS, JavaScript, Typescript.
- **Frameworks/Libraries:** ReactJS, Redux, Zustand, Next.js, ShadCN, Ant Design, ThreeJS
- **Styling:** TailwindCSS.

Backend:

- **Languages:** JavaScript, TypeScript, Java
- **Frameworks:** Spring Boot, Node.js, ExpressJS, NestJS, Next.js.
- **Message Brokers:** Kafka, gRPC.
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis (caching)
- **API development:** REST, GraphQL

Other:

- **Tools:** Git, Docker, NPM, Prisma
- **Concepts:** Microservice, OAuth 2, CI/CD, Role-based Access Control (RBAC), Agile development
